

Economics

Q1: When is honesty profitable?

Baseline/weak: SS

Strong $c=0$: HH

Strong $c=1$: all equilibria

Computer science

Q2: How do payments affect supply?

Fixed k ; top k bids win

Price: highest losing bid

Correction surplus W ; access $k/3$

Behavioral science

Q3: Will users pay for correction?

Observed: one author record

Correction A preferred

Stated WTP: $A=3$, $B=0$

Can net correction revenue change supply without sacrificing access?

H = verifiable correction. S = sycophancy. Demand values are hypothetical.

Solid boxes: computed model and author reflection. Dashed outline: proposed test.

Future design: matched tone/order, delayed accuracy, incentivized purchase.
